SUMMARY

Seasoned software engineer with a passion for bringing new, innovative software solutions to life, helping companies modernize, and making users happy. I have over 28 years of professional software development experience covering a wide variety of projects and environments. Outside of work, I enjoy keeping my skills sharp by taking online courses and working on personal projects that can help me be the best engineer I can be and to be more effective on the job. Currently, I am learning Kubernetes and Docker, experimenting with local cluster deployments, and taking a course in Next JS, incorporating the class project into my local Kubernetes cluster.

EXPERIENCE

Senior Software Engineer

Musicnotes.com

June 2016 – March 2024, Madison, WI

- Migrated legacy Access-based royalties configuration application to modern .Net Core stack.
- Designed and implemented a batch royalties reporting system, reducing reporting time from 24 hours to less than 2 hours.
- Designed system for generating formatted Publisher-facing royalties reports, saving 2 weeks worth of manual labor per quarter.
- Designed and implemented a new email message processor, responsible for generating over 1,000,000 e-receipts, newsletters, and abandon cart (and other) emails to our customers yearly.
- Modernized Hal Leonard music purchase pipeline, removing the reliance on obsolete and unsupported software.
- Instrumental in migrating all legacy, internally facing applications to modern practices.
- Provided architectural expertise and oversight for the modernization of our monolith commerce website and internally facing software applications.
- Developed key features on our commerce website, including a new digital music books product line, Pro Membership discount club, Educators Discount feature, Wish List, and many more.

Software Engineer

Sonic Foundry

January 2015 – June 2016, Madison, WI

- Implemented accessibility for the visually impaired within the Mediasite media player platform which serves thousands of students' and employees' video instructional needs.
- Maintenance of all Javascript and Flash-based media players within Sonic Foundry's Mediasite application.
- Worked tightly with SQA to provide build-specific hot-fixes as requested by customers.
- Designed comparative performance metrics across several media delivery platforms.
- Implemented cohesive, standardized keyboard control across all media players within the Mediasite platform.

Software Developer Consultant

Yahara Software

December 2012 – January 2015, Madison, WI

- Developed distributed, online livestock auction application using WPF, SignalR and Sql Server.
- Integration of medical pipetting automation technology with modern control and program automation interface.
- Implementation of new features into legacy data-acquisition applications
- Analysis and development of a wide variety of solutions using Asp .Net MVC, JQuery and Sql Server.

Applications Developer

UW Facilities Planning & Management

January 2006 – December 2011, Madison, WI

- Redesign of time tracking application serving over 2,000 UW employees across many departments.
- Maintenance of UW Madison parking registration application, serving all of UW Madison on-campus parking.
- Migration and redesign of the UW Office of Resource Development class registration portal, serving 10,000 plus individual faculty registrations yearly.
- Upgrade billing protocol for UW College of Engineering copy production portal, which serves bulk printing needs across all of UW Madison campus.
- Development and maintenance of various other UW department portal applications.

PROJECTS

Royalties Reporting Batch Processor

Musicnotes • December 2023 – January 2024

- Architectural design and implementation of the Batch Processor, which generates over 5000 individual raw and formatted royalties reports quarterly.

- Project lead, overseeing 3 developers and a DBAs in the implementation process
- Organized design and requirements gathering meetings
- Migrated legacy reporting applications from legacy Access into a modern .Net 6 solution.
- Reduced reporting time form over 24 hours to under 2 hours per quarter.
- Reduced manual reporting format from 7 days per quarter to mere hours.

Musicnotes Push Processor

Musicnotes • August 2023 – October 2023

- Designed new processor for generating images and previews for a new product line, digital music books.
- Integration of new Azure Sql schema data into legacy data models.

Hal Leonard Purchase Pipeline

Musicnotes • January 2023 – April 2023

- Migrated critical purchasing functionality out of obsolete code into a .Net 6 solution.
- New implementation unlocks the full API available from the Hal Leonard Digital Access Management portal.
- New implementation opened a new avenue of product to acquire and sell on the commerce website.
- Integration into legacy Access applications with a design eye toward modern usage post Access applications deprecated.

Royalties System Migration

Musicnotes • June 2020 – January 2021

- Migrated royalties configuration system to Blazor and .Net 6 from legacy Access.
- Led analysis of legacy royalties system.
- Realized hours of time saved per week with modern stream-lined system, which serves over 2000 publishers.

Queued Message Processor

Musicnotes • January 2019 – May 2019

- Architectural design and implementation of customer emailing system.
- Integration with Adobe ACS marketing platform.
- Fail-safe email system serves over 1,000,000 eReceipts, newsletters, abandon cart (and more) customer emails yearly.

Pro Membership

Musicnotes • January 2017 – June 2017

- Data design multi-tiered Pro Membership subscription model, serving over 80,000 active subscribers.
- Integration with 3rd-party payment processor to handle subscriptions.
- Implementation of web-hook API for handling recurrent rebilling, and other subscription activity.

EDUCATION

Bachelor of Science in Computer Science

Minor in Music • North Central University • Naperville, IL • 1995

SKILLS

.Net 6, .Net Core, ASP .Net, ASP .Net MVC, Blazor, React JS, JQuery, Sql Server
