SUMMARY

Seasoned software engineer with a passion for bringing new, innovative software solutions to life, helping companies modernize, and making users happy.

EXPERIENCE

Senior Software Engineer

Musicnotes.com

June 2016 – March 2024, Madison, WI

- Migrated legacy Access-based royalties configuration application to modern .Net Core stack.
- Designed and implemented a new batch royalties reporting system, reducing reporting time from 24 hours to less than 2 hours.
- Designed system for automatically format Publisher-facing royalties reports, saving 5 days worth of manual labor across the royalties department per quarter.
- Designed and implemented a new email message processor, responsible for generating over 1,000,000 e-receipts, newsletters, and abandon cart (and other) emails to our customers yearly.
- Modernized Hal Leonard music purchase pipeline, removing the reliance on obsolete and unsupported software.
- Instrumental in migrating all internally facing applications to modern practices.
- Provided architectural expertise and oversight for the modernization of our monolith commerce website and internally facing software applications.
- Developed key features on our commerce website, including our new digital music books product line, Pro Membership discount club, Educators Discount feature, and many more.

Software Engineer

Sonic Foundry

February 2014 – June 2016, Madison, WI

- Maintenance of all Javascript and Flash-based media players within Sonic Foundry's Mediasite application.
- Implemented accessibility for the visually impaired within the Mediasite media player platforms.
- Designed comparative performance metrics across several media delivery platforms.

Software Developer Consultant

Yahara Software

January 2012 – January 2015, Madison, WI

- Development of a wide variety of solutions using Asp .Net MVC, JQuery and Sql Server.
- Integration of legacy medical device applications with modern control interfaces.
- Analysis and migration of a wide variety of legacy applications.

Applications Developer

UW AIMS

January 2006 – December 2011, Madison, WI

- Redesign of time tracking application serving over 2,000 UW employees across many departments.
- Maintenance of UW Madison parking registration application.
- Migration and redesign of the UW Office of Resource Development class registration portal, serving 10,000 plus individual faculty registrations yearly.

PROJECTS

Royalties System Migration

Musicnotes • February 2022 – March 2024

- Migrated royalties configuration system to Blazor and .Net 6 from legacy Access.
- Led analysis of legacy royalties system.
- Realized hours of time saved per week with modern stream-lined system, which serves over 2000 publishers.

Royalties Reporting Batch Processor

Musicnotes • December 2023 – January 2024

- Architectural design and implementation of the Batch Processor, which generates over 5000 individual raw and formatted royalties reports quarterly.
- Project lead, overseeing 3 developers and a DBAs in the implementation process
- Organized design and requirements gathering meetings
- Migrated legacy reporting applications from legacy Access into a modern .Net 6 solution.
- Reduced reporting time from over 24 hours to under 2 hours per quarter.

- Reduced manual reporting format from 7 days per quarter to mere hours.

Musicnotes Push Processor

Musicnotes • August 2023 – September 2023

- Designed new processor for generating images and previews for a new product line, digital music books.
- Integration of new Azure Sql schema data into legacy data models.

Pro Membership

Musicnotes • July 2023 – August 2023

- Data design multi-tiered Pro Membership subscription model, serving over 80,000 active subscribers.
- Integration with 3rd-party payment processor to handle subscriptions.
- Implementation of web-hook API for handling recurrent rebilling, and other subscription activity.

Hal Leonard Purchase Pipeline

Musicnotes • February 2023 – May 2023

- Migrated critical purchasing functionality out of obsolete code into a .Net 6 solution.
- New implementation unlocks the full API available from the Hal Leonard Digital Access Management portal.
- New implementation opened a new avenue of product to acquire and sell on the commerce website.
- Integration into legacy Access applications with a design eye toward modern usage post Access applications deprecated.

Queued Message Processor

Musicnotes • January 2020 – February 2020

- Architectural design and implementation of customer emailing system.
- Integration with Adobe ACS marketing platform.
- Fail-safe email system serves over 1,000,000 eReceipts, newsletters, abandon cart (and more) customer emails yearly.

EDUCATION

Bachelor of Science in Computer Science

Minor in Music • North Central University • Naperville, IL • 1995

SKILLS

.Net 6, .Net Core, ASP .Net, ASP .Net MVC, Blazor, React JS, JQuery, Sql Server
